

BUI XUAN TRUONG

PERSONAL DETAILS

Full Name:	Bui Xuan Truong
Job Titles:	Senior Mobile Engineer/Lead Engineer
Date of Birth:	June 13 st 1994
Place of Birth:	Thai Binh, Vietnam
GitHub:	https://github.com/TruongGlacio
LinkedIn:	https://www.linkedin.com/in/bùi-xuân-trường-43b521190
Phone/email:	+84359018836 / buixuantruong.tb@gmail.com

SUMMARY INFORMATION

Senior Mobile Engineer with over **8 years of experience** delivering enterprise software across **Flutter, Android (Java/Kotlin), iOS, Embedded Systems, and Backend development**.

Extensive experience designing and developing scalable mobile applications for **Banking, Human Resource Management, Vehicle Tracking, EV Charging, Retail, Education, IoT, and Automotive** industries. Proven ability to lead development teams, design system architecture, mentor engineers, and deliver high-quality software throughout the entire software development lifecycle.

Strong technical expertise in **Flutter, Kotlin, Java, Clean Architecture, MVVM, RESTful APIs, Firebase, MQTT, Bluetooth, GPS, SQLite, Spring Boot, Python, and Mobile Security**.

Experienced working in both **Product** and **Outsourcing** environments while collaborating with cross-functional teams following Agile/Scrum methodologies.

EDUCATION HISTORY

From: 09/2012 To: 10/2017	University: Ha Noi University of Science and Technology, Vietnam
------------------------------	--

TECHNICAL SKILLS

Core strengths	☐ 8+ years of Mobile Development ☐ 5+ years of Flutter Development ☐ Team Leadership & Technical Mentoring ☐ Enterprise Mobile Architecture ☐ Cross-platform Development ☐ Performance Optimization ☐ API Integration ☐ CI/CD Collaboration ☐ Embedded Software Integration
Mobile development	Flutter, Android (Java), Android (Kotlin), Jetpack Compose, iOS (Swift), C++
Programming languages	Dart, Kotlin, Java, C, C++, Python, JavaScript, Swift
Architecture	Clean Architecture, MVVM, Repository Pattern, Modular Architecture, SOLID Principles, Dependency Injection
State management	Bloc, Provider, GetX, Riverpod
Backend	Spring Boot, RESTful API, Kafka, Cloud Messaging,
Database	SQLite, MySQL, Firebase, Server, Supabase, Postgresql
Cloud & services	Firebase, Azure Storage, AWS S3
Mobile features	Bluetooth, BLE Beacon, GPS, Location accuracy, Routing và navigation, Google Maps, Open street map MQTT, Biometric Authentication, AES-256 Encryption, Push Notification, QR Code, Camera, Offline Storage, Isolate
Tools	Android Studio, VS Code, IntelliJ IDEA, Git, Jira, Confluence, Postman, Trello
Development methodologies	Agile / Scrum, Waterfall, ASPICE, ISO 26262
AI-Driven Development & Vibe Coding	• Extensive experience using AI tools (Chat GPT, GitHub Copilot, Gemini, Claude, Codex, Cursor AI) throughout the software development lifecycle. • Accelerate feature development by generating production-ready code, reusable components, and design patterns. • Utilize AI for debugging, log analysis, performance optimization, and issue investigation. • Generate unit tests, integration tests, documentation, API clients, SQL queries, and automation scripts. • Apply AI to software architecture discussions, code reviews, refactoring, and technical decision-making. • Create effective prompts to improve development efficiency and solution quality. • Extensive experience leveraging AI and Vibe Coding to rapidly build end-to-end software systems. • Strong prompt engineering skills to orchestrate AI workflows and accelerate software delivery while maintaining production-quality standards.

--	--

PROFESSIONAL EXPERIENCE

Company: IOTEK TECHNOLOGY (Nov 2025 – Present)

Position: Senior Mobile Engineer / Backend Engineer

Responsibilities:

- Develop enterprise mobile applications using Flutter for the MCMS Property Management Platform.
- Design and implement scalable RESTful APIs using Spring Boot.
- Integrate Autodesk Construction Cloud (ACC) into enterprise management systems.
- Develop secure communication modules using AES-256 encryption.
- Participate in system architecture design and technical planning.
- Collaborate with backend, frontend and DevOps teams to deliver production-ready software.
- Review code and mentor junior developers.
- Troubleshoot production issues and optimize application performance.

Project:

- MCMS

Technologies:

Flutter, Spring Boot, Java, Python, Kafka, Firebase, Azure Storage, Autodesk Construction Cloud, REST API, AES-256

Company: FFT SOFTWARE

Position: Lead Mobile Engineer (Mar 2023 – Nov 2025)

Responsibilities:

- Lead Flutter and native mobile development for multiple enterprise products.
- Design reusable mobile architecture shared across different business products.
- Manage development teams from 4–8 engineers.
- Perform code reviews and technical mentoring.
- Design APIs together with backend engineers.
- Build reusable UI components and internal libraries.
- Integrate third-party SDKs and enterprise authentication.
- Optimize application performance, stability and maintainability.
- Work directly with customers to clarify business requirements.

Projects:

- SmartHR
- KAFA Retail System
- EV Charging Platform
- GPS Tracking Platform
- Vehicle Monitoring Platform
- Enterprise Office Platform

Key Achievements:

- Led development of multiple enterprise applications simultaneously.
- Designed reusable Flutter architecture adopted by several company projects.
- Delivered applications for Android and iOS from a single codebase.
- Successfully integrated Firebase, MQTT, Google Maps, Biometric Authentication and Push Notification services.
- Improved development efficiency by introducing reusable components and common project structures.
- Participated in architecture discussions and technical decision making.

Technologies:

Flutter, Java, Kotlin, Swift, Firebase, MQTT, SQLite, REST API, Google Maps, Bloc, Azure, Biometric, AES-256

Company: SimbaTech (Nov 2021 – Mar 2023)

Position: Flutter Technical Lead

Responsibilities:

- Developed enterprise office application for MB Bank.
- Implemented digital document workflow.
- Integrated Viettel CA digital signature.
- Developed biometric authentication.
- Optimized Flutter application performance.
- Collaborated with backend and business teams.

Projects:

- MBBank Client: MOffice (Nov 2021 – Mar 2023)
- LPBank Client: LOffice (Aug 2022 – Mar 2023)

Technologies:

Flutter, Android, Swift, Viettel CA, REST API, Biometric

Company: EARLY START (Aug 2020 – Oct 2021)

Position: Lead Mobile Developer

Responsibilities:

- Managed a team of 3 mobile developers.
- Develop educational mobile applications for children.
- Maintain Android and iOS codebases.
- Optimize multimedia playback performance.
- Implement interactive learning features.
- Collaborate with UI/UX designers to improve user experience.
- Support release management and production maintenance.

Projects:

- Monkey Stories
- VMonkey

Technologies:

Android, Java, Swift, Cocos2d-x, C++, SQLite, Media Framework, REST API

Achievements:

- Successfully delivered learning applications for thousands of users.
- Improved application performance and stability.

Company: VNET / SONHA GROUP (Feb 2021 – Aug 2021)

Position: Android Team Leader Responsibilities:

- Lead Android development for GPS tracking products.
- Coordinate development activities for dealer-specific applications.
- Analyze customer requirements and prepare technical specifications.
- Design system modules and participate in architecture discussions.
- Maintain applications serving thousands of enterprise customers.

Key Achievements:

- Led Android development for over 20 customized dealer applications.
- Built reusable GPS tracking modules shared across multiple products.
- Integrated Google Maps, MQTT and real-time vehicle tracking.

Projects:

- VnetGPS
- TopGPS

Technologies

Java, Android, Swift, Firebase, MQTT, Google Maps, REST API, SQLite

Company: FPT SOFTWARE (**Feb 2018 – Feb 2021**)

Position: Senior Embedded Software Engineer / Mobile Engineer

Worked on multiple automotive software projects for Panasonic and international customers, developing embedded software, Linux applications and automotive infotainment systems following AUTOSAR, ASPICE and ISO 26262 standards.

Responsibilities:

- Designed and developed embedded software using C/C++.
- Developed Bluetooth, multimedia and communication modules for automotive infotainment systems.
- Participated in software architecture and detailed design.
- Created technical documentation, design specifications and testing documents.
- Performed debugging, performance optimization and software maintenance.
- Developed internal automation tools using Python.
- Collaborated with international customers and cross-functional engineering teams.
- Participated in code reviews and technical discussions.
- Worked in ASPICE Level 3 development environments.

Projects:

- AUTOSAR Safety Platform
- Panasonic Kingdom
- Automation Tool
- MIB3 Infotainment System
- A1 Platform

Technologies:

C, C++, Python, Embedded Linux, AUTOSAR, ISO 26262, ASPICE, Bluetooth, Ethernet, IPC, Qt, XML, Git, SVN

Company: VTI VIETNAM (Jul 2018 – May 2019)

Position: Software Engineer

Developed desktop applications, industrial monitoring systems, AI utilities and embedded control software for Japanese customers.

Responsibilities

- Designed desktop applications using Qt/C++.
- Developed industrial monitoring software.
- Designed PCB control systems.
- Developed AI-based translation applications.
- Built hardware communication software using RS232.
- Worked closely with customers during requirement analysis.

Projects:

- Translation AI
- Harmonic Control
- VTI SayHi
- RS Receiver
- NSTEX Monitoring System

Technologies:

C++, Qt, Python, AI, YOLO, RS232, Arduino, Altium Designer
